

FlexiMix

Why growers choose FlexiMix

Your success as a grower depends on a growing media that provides a solid foundation for your young plants. FlexiMix is produced by binding organic substrates into a cellular rooting sponge and then shredding the resulting product into granules. The result is a growing media with everything roots need to flourish.

The Optimum Growing Medium

Growers wanting a more consistent and low maintenance growing medium have chosen FlexiMix for over 20 years. Consistency comes from FlexiMix's unique water holding capacity. This not only means less watering from increased water retention but also a molecular structure that will not allow for over watering. FlexiMix's granular structure also provides the right amount of aeration allowing plants to thrive. **Contact us to learn more!**

Applications

- Interior Landscaping
- Exterior Landscaping
- Urban Gardens
- Large Scale Growers
- Green Roofs
- Living Walls
- Soil Amending
- Hydroponics
- Floating Islands
- Large Containers

Benefits

- Faster Rooting
- No Compression
- Biologicals Stimulating Healthy Root Growth
- Better Water Retention
- Improved Aeration
